Dear Scott Friend:

Thought you might be interested in comments from several Scott Farm Seed customers. From Iowa - "My last order of Scotts seed arrived as per notice. Thanks for your dependable service, but then the product speaks for the firm, and in your case I must tell you that dealing with a reliable firm is a real pleasure." From West Virginia - "Your service and seed has been highly satisfactory. You may look forward to my business in the future." From Ohio - "I got good seed corn from you and planted it last year. This year I bought some here and I am telling you the truth it wasn't half as good as your corn. Your Scott 75 can't be beat."

Quite a few folks have been urged to buy untested or poorly processed home grown seed this year. From talking with farmers and other seed firms as well as our own custom cleaning experience we feel sure some fields have been seeded with low germinating, poorly cleaned seed and doubt if most farmers can afford the risk of a thin meadow or a seeding failure. The extra few cents per acre for well processed, noxious weed free, tested seed helps insure top production.

## SEED CORN - SOYBEANS

There is plenty of time for delivery on seed corn and soybeans. Supplies of some Scott Hybrids and a few Certified ones are getting low but most will be able to get the hybrid they prefer. There is an increased demand for earlier hybrids due to poor weather conditions for harvesting last year's crop. Sound corn in the crib is more important than record yields.

Monroe is the earliest soybean variety recommended in Ohio. A week to ten days earlier than Hawkeye, a good yielder and suited for late planting or where an early maturity is needed. Hawkeyes are equal to Lincoln in quality and usually in yield, superior in stiffness of stalk, four to six days earlier and better suited where wheat is to follow. Lincoln is a high yielding, full season, widely adapted variety and used where seeding wheat after soybeans is not a problem. The black soybeans are suited for hay production and are finer stemmed and leafier than the yellow varieties.

## EMERGENCY HAY AND PASTURE

Sudan grass, soybeans and millet are most widely used. Sudans are seeded at about 20 pounds, millet at 30 to 40 pounds and soybeans at 2½ bushels per acre. Sudan and millet should be seeded rather shallow and fertilized for satisfactory stands and vigorous growth.

## COVER CROPS

Annual and perennial ryegrass, crimson clover, vetch and yellow sweet clover may be seeded alone or in mixtures. Seeded alone the recommended rates per acre are: Ryegrass 20 pounds, crimson clover 15 pounds, vetch 25-30 pounds and sweet clover 15 pounds. In a mixture each is used at about half the normal rate. Also have a limited supply of rye on hand for early seeding.

# TREATED HYBRID SEED CORN

SCOTT'S Hybrid Corn has been graded for width, length and thickness and will plant easily and accurately in any make of planter. Ohio Certified and Experimental Hybrids not listed are available upon inquiry.

The round kernels are graded uniformly and will yield just as well as the flats but special plates are usually required for accurate planting. These plates are available for most standard planters. All corn is treated for protection against disease.

SCOTT'S 11—Slightly earlier than Ohio M-15. Large ears for an early hybrid. Has out-yielded Ohio M-15. Sound dark yellow ears. Suited to short season or late planting.

SCOTT'S 33—Maturity of K Hybrids. A real producer with disease and smut resistance. Easy husking, nice fodder, not as tall as K-24. Will pick clean and crib early.

SCOTT'S 75—Slightly earlier and not quite as tall as most of the C Hybrids, blight resistant, sturdy stalks, large dark yellow ears, bred for handy size and high yields.

SCOTT'S 22—The maturity of Ohio M-20 and M-34. Has outproduced its maturity class on many different farms. Good roots, sound ears, dries out quickly.

SCOTT'S 66—One of the best medium early maturing hybrids in the corn belt. Disease resistant, husks easily, strong roots, high yields on a wide variety of soils.

SCOTT'S 99—Maturity of U.S. 13 and bred for more corn borer resistance and higher yield. Dark green color. Not quite as tall as U. S. 13. Good sized, sound ears.
